■ github.com/xxxJay123 ■ portfo.xxxjay123.xyz ■ Hong Kong

PROFILE

Admin & IT Support who turns recurring office work into software colleagues use every week — including a reconciliation tool that cut a **1,000+ record monthly process from several days to under one day**. Founder and sole engineer of **Lyrithm**, a multi-service trading platform (Java / Spring Boot, Python, Next.js) that grew out of a personal Vegas + ADX strategy bot and now executes across seven perpetual-futures venues, including on-chain DEXs. **AI-native**: builds daily with Claude Code and Codex agents, with tests and CI deciding what ships. Learns like a trader: accumulate, wait for the right entry, then compound. Seeking **IT / software developer** roles, long term in **fintech and blockchain**.

EXPERIENCE

Admin & IT Support · AIT Worldwide Logistics (Hong Kong)

Aug 2024 – Present

Joined as Admin Assistant; title formalised as Admin & IT Support in 2026 to reflect the IT and development work.

IT SUPPORT & SYSTEMS

- Image and deploy new PCs with the corporate Windows image (.iso / .wim) and get users productive; work with the regional IT team on legacy-software removal and hardware model selection, then roll out the decisions.
- Administer the **door-access system (ZKAccess 3.5)** — database upkeep and backups — after moving it onto this vendor-supported version when the legacy host was retired; produce staff ID cards.
- Manage telecom, broadband, printer-fleet and hardware vendors; write staff IT guides (Teams virtual backgrounds, Outlook mailbox backup).

AUTOMATION & INTERNAL TOOLS

- Built and maintain a **reconciliation app** for Tradelink trade declarations vs. CargoWise costs — **~1,200 declarations a month**, contract fee tiers applied automatically, discrepancies flagged; turnaround cut from **several days to under one day**. Python · pandas · openpyxl · Tkinter
- Built and maintain a **key-account billing tool** (~400 HAWBs a week) that classifies charges into freight, fuel, security and other; working with the **US IT team** on a CargoWise batch-printing workflow for HAWBs and invoices.
- Ship tools as versioned Windows installers with tests and a **compliance write-up** for IT review. Also built: a bilingual name-card generator, a lateness-report tool from HR data, an office group-ordering web app and the annual-dinner voting app. PyInstaller · Inno Setup · PyMuPDF · Cloudflare Workers · D1 · React · Firebase

OPERATIONS & COMPLIANCE

- Run **accounts payable in CargoWise** end to end — cost cross-checks, approvals, cheques, posting and matching, eDoc filing — and book ~100 EC registration-fee receivables a month.
- Prepare compliance documents and SOPs: bilingual vendor-onboarding forms (approved by regional leadership), **fire-escape route maps** for 9 zones generated from one data model to meet ISO requirements, chop-management and handover templates; maintain the HK org-chart template; organise the annual dinner.

Founder & Software Engineer · Lyrithm (lyrithm.io), independent

2025 – Present

- Grew a personal Vegas + ADX trading bot into a **multi-service quant platform**: a Java / Spring Boot engine orchestrating Python strategy workers over **gRPC**, a separate backtest / paper-trading sandbox, and a Next.js dashboard with Clerk auth.

- Integrated **seven perpetual-futures venues** — centralised exchanges and **on-chain perpetual DEXs** — behind one normalised order / position / candle contract; trade-only keys encrypted at rest, withdrawal permission never requested.
- Implemented pre-trade **risk gates** (loss, position, cooldown), a reconciliation watchdog, and Telegram alerts with inline actions plus a Mini App console.
- Run production on a Linux VPS with **Docker blue-green deployment**; CI runs JUnit / pytest / vitest on every PR plus weekly OWASP dependency-check, pip-audit and npm audit.
- Built with an **AI-agent workflow** (Claude Code, Codex) — agents propose changes; tests, CI and Docker smoke checks decide. Published an **Apache-2.0 Python strategy SDK**; Cloud edition live (private alpha) since June 2026.

Marketing Sales · Skynet Creative

Feb 2024 – Jul 2024

Marketing strategy and campaigns driven by market, competitor and customer data.

Insurance Agent · AIA Company Limited

Jun 2022 – Apr 2023

Client advisory, underwriting applications and long-term relationships.

Financial Consultant · Convoy Financial Services Limited

Oct 2020 – Apr 2022

Wealth-management plans, investment research and client trade execution.

PROJECTS

- portfo.xxxjay123.xyz — personal site: a Three.js voxel portrait and scroll-driven storytelling.
React · Three.js · Motion · Vite

hk-neon-frames — framework-agnostic Hong Kong neon sign frames for HTML, React and Vue; MIT, CI.
JavaScript · SVG
- reMarkable Chinese Toolkit — Chinese fonts, input method and handwriting tooling for e-paper tablets.
C++ · QML · Librime

ProTrader — trading simulator with a hand-built SVG candlestick engine, no chart libraries.
React · Vite

WEB3

- On-chain perpetual DEX integration running in production (Lyrithm).
- Solidity & EVM fundamentals — public study notes at github.com/xxxJay123/Solidity-Note.
- Operated Quilibrium and CAT Protocol nodes; ESP32 Bitcoin miner. Learning Foundry, smart-contract security, viem.

SKILLS

- AI & agents

Claude Code, OpenAI Codex, ChatGPT, MCP, agent skills & context engineering, prompt engineering, LLM API integration
- Languages

Java, Python, TypeScript / JavaScript, SQL, Solidity (learning)
- Backend

Spring Boot, REST, gRPC, JDBC, microservices
- Frontend

React, Next.js, Vite, Three.js, Tailwind CSS, WebGL2
- Data

PostgreSQL, MySQL, MongoDB, Redis, SQLite, Cloudflare D1, Firestore
- DevOps

Docker, GitHub Actions, Linux VPS, Cloudflare Workers, Vercel, OWASP dependency-check
- Automation

pandas, openpyxl, Tkinter / customtkinter, PySide6, PyInstaller, Inno Setup
- IT support

Windows imaging & PC deployment, access control (ZKAccess), software packaging, IT vendor management
- Logistics

CargoWise (AP, eDoc), Tradelink trade declarations, billing reconciliation

EDUCATION

- Certificate in Frontend Web Developer · ERB

Nov 2023 – Feb 2024
- Java & Spring Boot Microservices Bootcamp · Venturenix LAB (certificate)

Jul 2023 – Oct 2023
- Global Purchasing & Supply Management · VTC (not completed)

Sep 2018 – Feb 2020
